

Case Study

British Postal Museum & Archive

Shaping the modern world

The British Postal Museum and Archive (BPMA) is the leading resource for British Postal heritage. Its mission is to connect people through the evolving story of communications past and present. The BPMA uses an Enterprise package of Third Light's media software to manage more than 150,000 media files that document their collections.

In need of a solution

Before Third Light, BPMA stored all of its digital assets on hard drives. The organisation of the drives mirrored the structure of the 'Calm' collection system used to document and manage the BPMA's items, but there were regular complaints from staff who could not find what they needed in a timely manner.

THE BRITISH POSTAL MUSEUM & ARCHIVE

“ Staff complained that browsing through folders for images was too slow.

One user estimated that they spent half a day each week finding the files they needed. ”

Supplying Solutions → Third Light Functionality

After comparing three image management solutions in detail – Extensis Portfolio, iBase and Third Light – the BPMA agreed that Third Light had more features and cost less.

BPMA chose an Enterprise edition of Third Light's software, and they installed it on their own IT infrastructure.

Sharing is simpler

All users of the Third Light software have the ability to create and share Lightboxes. The BPMA team finds this an extremely useful way for staff to share files between themselves and with external agencies, such as the press and exhibition organisers.

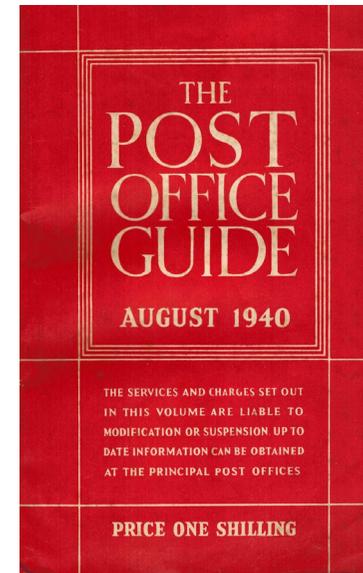

Easier viewing, tagging, and editing

With the Third Light software in place, the BPMA gained access to tools it had previously lived without. These included:

- Easy viewing of digital images at full size.
- Tagging of digital images, with details including exchangeable image file formats.
- Cropping and reformatting of images.
- Use of images on the web; for use in social media and websites.

“

What has impressed us from the start, and continues to do so, is the level of customer support we receive. Direct and rapid support from helpful people at Third Light means that problems are resolved quickly and with the minimum of fuss. More than that, they are open to new feature requests, and updates to the feature-set happen regularly.

”

– Martin Devereux,
Digital Content Development Manager, BPMA.

Success With Software → User Advice

After more than four years working with Third Light image management software, BPMA reflect on their advice for adoption:

Let tags do their work

The BPMA team warns against being too reliant on initial folder structures, to the detriment of tagging. Tagging make assets more findable in the long run whatever the folder structure, even when the files are moved to other systems. Third Light agrees: This is best practice.

Always enter metadata

In its original transition to the Third Light system, the BPMA did not enforce metadata tagging for reasons of expediency. The amount of time spent by central teams servicing requests for images from other teams has greatly reduced since IMS enabled self-service – but this could go further still, with better tagging.

Be open to evolution

The Collections team has been thinking about how it archives digital objects. The Post Office now offers digital services (also part of its ongoing heritage) and the archive of Royal Mail and Post Office from the 21st century will consist mostly of digital objects.

BPMA point out that the Third Light software has many of the characteristics required in a repository of digital archives, and have suggested an ‘authentication’ feature as well as support for the storage of PRONOM-listed file types.

“

The functionality of the Third Light system has grown steadily to incorporate changes to users’ needs, such as plugins for Adobe Bridge, Lightroom, direct sharing to social media platforms and Dropbox.

Adding metadata and configuring the system is pretty simple and the level of reporting is great for tracking use and monitoring the way staff use the system.

”

– Third Light wishes to thank the BPMA’s Ian Tolley and Martin Devereux for providing feedback for this case study. For more on the implementation of Third Light software at the BPMA, please contact roland.henry@thirdlight.com.

About Third Light

Third Light is a software and internet services business based in Cambridge, UK. Our core business is to develop and host specialist solutions for digital media management, storage and collaboration, while minimising technical complexity. Key clients include Cambridge University, the United Nations, NASCAR, Virgin Group, Fujitsu and many other businesses. We have supplied web-based asset management tools to businesses since forming in April 2002.
